

# TERRITORIAL INTELLIGENCE

## caENTI

Coordination Action of the European Network of Territorial Intelligence  
Funded by Research FP6 of the European Union

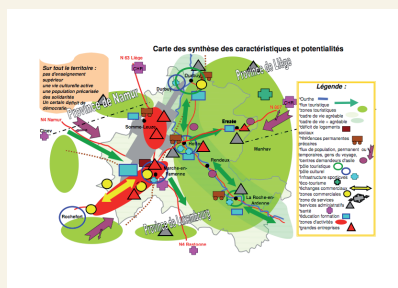

## Intégra Plus

**Intégra Plus is an association of public Centres of Social action, which has its own legal personality since 2002. It was born from a strong partnership between social and economic actors located in the Nord Luxembourg, a Belgian province.**

The association Intégra Plus has coordinated an economic and social observatory for more than ten years on a rural territory. It is presently made up of 7 communes, so as to continuously gather information linked to people in the employment, mobility, health and housing fields, and more generally in the socio-professional integration field.

The fight against social and economic exclusion requires new global and concerted approaches. From this perspective, the actors of the social and professional integration of the Nord Luxembourg decided to develop bridges between the existing devices (social integration, socio-professional integration, creation of activities and social economy) and to reinforce their complementarity, so as to offer prospects to the less skilled and more weakened people.

This global approach that benefits from different methodological contributions (Equal, prospective step...) allows the Intégra Plus partnership to continuously measure its actions impacts and to define its development strategy.

### Participation to the caENTI project

- The objectives of the Intégra Plus participation to the caENTI project were: communication and exchanges about its practices, methods, tools and results.
- Concretely, Intégra Plus was particularly involved in the execution of the Catalyse toolkit within the WP6 TOOLS framework, in collaboration with Optim@.
- Intégra Plus participated to the execution of the European diagnosis guide, to the definition of the repertory file questions, to the selection of territorial indicators, to the data-processing and methodological specifications and to the analysis protocol of the Pragma software.
- The evaluation of the Catalyse method practice within the Intégra Plus and Optim@ development partnership allowed to jointly present a set of recommendations for the Catalyse method implementation in other development partnerships.
